

Flourish

By: Francisco Morales,
Julianne Louie, and Kellie Au

Gamifying Community Wellbeing

- Our website encourages groups to take care of each other:
 - Friends on a night out
 - Athletes during season
 - Study groups before exams
- Each time you complete a task (i.e. hydration), your group receives points that can go towards creating and cultivating a beautiful garden

Goals

- Incentivize taking care of the people you love
- In real-time, knowing the health, status, and progress of your friends
- Allow coaches/teachers to create groups for their athletes/students and encourage them to complete specific tasks
- The website also functions for individuals who can create tasks and motivate themselves to complete them
- **Promote physical, mental, emotional, and social health across a community**

Future

- Add more themes and functionality
- Make the gardens more fun and fresh
- Add the option to take care of animals in a zoo
- Convert this to a mobile app
- Push it out to the 5c's and eventually everywhere!
